WE SUPPORT THE SUSTAINABLE DEVELOPMENT GOALS

Aluflour AB has received its sustainability declaration SIS / TS 2: 2025 to SS-EN ISO 26000: 2021, verified according to SIS / TS 3: 2025, on 31st of October 2025 which shows the organization's social responsibility to maximize the contribution to sustainable development.

The credibility of the self-declaration and conformity with real conditions has been verified by VERIFY Agency of Sweden AB with accreditation number 10482 and is accredited by Swedac for verification for ISO / IEC 17029: 2019.

The self-declaration consists of the management's statement and the organization's answers to the questions in SIS / TS 2: 2025, which is based on SS-EN ISO 26000: 2021 Organizations' social responsibility - Guidance.

Assessment and Statement

Verify Agency has performed the verification through interviews with the organization's staff and through a sampling of the documentation that the organization refers to in the sustainability declaration and in the management of its sustainability work. Aluflour AB is deemed to meet the requirements of SIS/TS2:2025. Aluflour AB considers and continues to work with the principles of social responsibility both internally with employees and externally with customers, suppliers, and other prioritized stakeholders. In this work, the company is based on the seven principles in ISO26000 as well as the Sustainable Development Goals framework, where management and division of responsibilities for these areas are being worked out in the business.

Founded in 1973, Alufluor AB is a mid-sized company that operates through a single site in Helsingborg, Sweden, employing 47 people. Aluflour AB leverages circular economy principles to minimize waste and environmental impact. Geographically this location benefits from robust infrastructure supporting the company’s logistical needs, as it is part of an industrial park that facilitates supply chain operations. The facility is a chemical plant primarily focused on the production of aluminum fluoride (AlF3) using the fluorosilicic acid (FSA) based wet reduction processes, leveraging circular economy principles to minimize waste and environmental impact. Alufluor’s main product, AlF3, is primarily used in primary aluminum production, where it acts as a flux, helping to reduce the amount of electricity consumed.

Aluflour AB is doing its second verification in 2025. The scope of the verification is Aluflour’s single site in Helsingborg, Sweden. Alufluor's sustainability declaration covers the company as a whole, including management and administrative aspects of the organization, as well as operational aspects, everything centralized around its single site in Helsingborg, Sweden. Aluflour AB has carefully answered the questions in the self-declaration and provided documents that support these answers.

During the verification process, Alufluor AB has shown that their work creates the conditions for sustainable production with a focus on circular economy. The verification process has underlined that applying sustainable solutions is natural in their activity. Since its foundation in 1973, the company has continuously focused on the processes that enhance materiality efficiency and waste reduction. Not only has this been an essential part of Alufluor’s value proposition since its origin, but it is also central to its business model. Therefore, the company places constant effort and resources into further improving the efficiency of its operations and processes. One example is their participation in the EU-funded iWAYS project, which aims to develop innovative energy-, water-, and material-saving solutions. At the same time, the company aims to exceed the average company in terms of working conditions, safety, and compensation.

The verification process has identified a strong organizational culture of commitment to the company's values and goals and contributing to a more sustainable world within its operational sphere. At the same time, it has been verified that the company actively engages with key stakeholders, including employees, customers, owners, authorities, and local communities, ensuring their interests are considered in decision-making.

Terms and Conditions

This statement must be renewed within twelve months from the date below. The statement may be revoked before the period of validity if facts have been added that show that the organization's social responsibility has decreased.

When the self-declaration is communicated publicly, this must be done together with the verification body's statement.

Decisions in this matter have been made by the Decision Maker Eva Vati, after a presentation by Lead Impact Auditor, Boris Matijas.
